Early Demo Goals

This demo is designed to showcase the key capabilities and personality of the QoLA Assistant.
It highlights how the assistant communicates across different channels (chat, voice, avatar, sms, and phone calls), how it remembers all conversations and responds with emotional intelligence, handles real-time queries, and adapts its tone based on context.

The goal is to provide a clear, human-centered view of what QoLA can do — not just technically, but relationally — through thoughtfully selected interactions.
